**Dear Hiring Manager,**

I'm writing to apply for the Vulcan Technical Writer role at Maptek. Your description of what good help documentation should do — anticipate the user's questions, not just describe features — is exactly the standard I've held myself to in every piece of technical writing I've produced, without anyone asking me to.

I hold a Bachelor of Information Technology, and across every project I've built over the past year, documentation has been a genuine, deliberate part of the work, not an afterthought tacked on at the end. For **SkyOps** ([skyops-api-8dn9.onrender.com](https://skyops-api-8dn9.onrender.com)), I distilled a genuinely complex DevOps pipeline — containers, Kubernetes, CI/CD, monitoring — into a structured README with quick-start guides, architecture explanations, and configuration tables, written for someone with far less context than I had. For **TicketDesk** ([ticketdesk-app.onrender.com](https://ticketdesk-app.onrender.com)), I built auto-generated, interactive API reference documentation that stays accurate as the underlying product changes — a concern I imagine matters a great deal for Vulcan's documentation as the software evolves.

As Project Manager on a university capstone, I led a 5-person team delivering **Call-a-Technician** ([callatechnician.com.au](https://callatechnician.com.au)), a live platform now used in production by a real business. Part of that role was taking technical decisions made by the development team and translating them into documentation a non-technical client could actually understand and act on — the same "digest material from subject matter experts and reformulate it" skill your role description calls out directly.

I have high computer literacy, a logical and detail-oriented approach to structuring information, and genuine empathy for the reader — I've felt the frustration of poor documentation myself, which is exactly why I take it seriously when I'm the one writing it. I'm comfortable learning complex technical software quickly and I'm a strong collaborator with development teams.

Thank you for considering my application — I'd welcome the opportunity to discuss how I could contribute to Maptek's documentation team.

Kind regards,

**Priyanshu**
