Dear Hiring Manager,

I'm writing to apply for the IT Systems Engineer role at Secure State. What stood out to me in your listing is that this role is built around client trust and communication as much as technical skill — that combination is exactly where I want to build my career, and it's the part of my background I think speaks loudest for this role.

I hold a Bachelor of Information Technology from Federation University Australia and a Google IT Support Professional Certificate, with practical experience across Microsoft 365 administration, Azure/Entra ID, Active Directory, Windows environments, and core networking. Just as importantly, I've spent the last year working directly with a real external client as Project Manager on a university capstone, **Call-a-Technician** — a live booking platform now used in production. That role had me gathering requirements directly from the client, managing expectations across sprints, and reporting progress clearly and consistently — the same client-facing skills your listing highlights as mattering most.

I've also built and now maintain three production systems on my own initiative, including **TicketDesk**, a help-desk ticketing platform with a full ticket lifecycle, automated testing, and live monitoring (ticketdesk-app.onrender.com), and **SkyOps**, where I built a health-check service that proactively monitors system status and surfaces issues before they escalate (skyops-api-8dn9.onrender.com). Both required me to write clear technical documentation, troubleshoot issues independently, and keep systems reliable over time — the same operational mindset needed to support MSP client environments.

I don't yet have formal experience working a service desk or in an MSP setting, but I bring a genuine customer-service mindset from two years of direct client-facing work in commercial cleaning, where I consistently scored 95% in client quality surveys by communicating clearly and following through reliably. I'm calm under pressure, solutions-focused, and confident I can pick up your specific tools and client environments quickly given my existing technical foundation.

I'd welcome the chance to discuss how I can contribute to your team. Thank you for considering my application.

Kind regards,

Priyanshu
