Dear Tania,

I'm writing to apply for the Business Systems Analyst role at Eldercare. I want to be upfront from the outset: I don't yet have proven experience implementing or supporting a specific Enterprise-level platform such as a QMS, ERP, CRM, or Clinical System. What I'd ask you to weigh instead is the underlying work I've already done, which is genuinely the same skill set this role is built around — just applied through self-directed projects rather than a previous job title.

As Project Manager on a university capstone, I led a 5-person team to deliver Call-a-Technician (callatechnician.com.au), a live platform now used in production by a real business. My direct responsibility was collecting, clarifying, and translating a real client's business requirements into functional and technical specifications, then configuring system workflows, access roles, and reporting around their actual operational needs — and training stakeholders on how to use the finished system once delivered. That is, in substance, the requirements-to-configuration-to-training cycle this role describes.

On **TicketDesk** (ticketdesk-app.onrender.com), I built a 23-test automated suite specifically to verify changes were safe before they reached production — the same test-before-release discipline this role applies when validating new system versions with business users prior to release.

I hold a Bachelor of Information Technology, and I bring outstanding customer service and the ability to tailor communication for different audiences, built through two years of direct client-facing work at VIP Cleaning Services, where I consistently scored 95% in client quality surveys. I'm genuinely results-driven and take real pride in getting details right, which I understand matters deeply in a quality-regulated aged care environment.

I recognise this role likely expects more direct enterprise systems experience than I currently have, but I'd welcome the opportunity to discuss how my practical, hands-on approach could still add real value to your team. Thank you for considering my application.

Kind regards,

Priyanshu
