Dear Hiring Manager,

I'm writing to apply for the Software Advisor role at CDK Stone. I'm currently based in Adelaide and open to relocating to Melbourne, and I'm genuinely excited about the idea of travelling interstate and working directly with customers rather than staying behind a desk.

I don't have direct experience with CAD/CAM software or CNC machinery, but I'm exactly the kind of person your "About You" section describes — I'm the one friends and family call when something technical breaks, not because I already know the fix, but because I enjoy figuring it out. Over the past year I taught myself to independently design, build, and launch three live software products from scratch, with zero formal training, simply because I wanted to understand how they worked. That's a direct demonstration that I can pick up SeKon and StonePro quickly and confidently.

What I think matters even more for this specific role is my experience translating a customer's actual needs into a working solution and then training them on it. As Project Manager on a university capstone, I led a 5-person team delivering a live booking platform for a real business client — I walked through their workflow, customised the build around what they actually needed rather than a generic template, and trained them on how to use the finished product. That's the same walk-through, customise, and train process described in this role, just applied to a different industry.

I genuinely enjoy explaining technical things in a way people actually understand, and I build relationships through reliability — two years of direct, recurring client-facing work in commercial cleaning have me consistently scoring 95% in client quality surveys. I'm hands-on, curious, and ready to travel for the role.

Thank you for considering my application — I'd love the opportunity to discuss how I could grow into this with your team.

Kind regards,

Priyanshu
