2 July 2026

Dear Hiring Manager,

I'm applying for the KPMG 2027 Graduate Program in the Technology & Digital pathway. I'm curious, analytical, and genuinely excited by the pace of digital innovation — and over the past year I've built a body of practical, end-to-end technical work that I believe sets me apart from most graduate applicants.

I'm a recent IT graduate from Federation University Australia. Rather than waiting for employment to gain experience, I independently designed, built, and deployed three live production systems while still studying — covering cloud infrastructure, DevOps, cyber security monitoring, software engineering, and AI. My most significant project, **Call-a-Technician** (callatechnician.com.au), was delivered as Project Manager for a real business client — I led a 5-person team through requirements gathering, digital solution design, Agile delivery, and a live production launch. That direct experience of how technology solutions come to life in a client-facing environment is, I think, what KPMG's graduate description captures best: "real client work from the start."

On the technical side, I've built a complete cloud-native infrastructure pipeline using Docker, Kubernetes, Helm, Terraform, and GitHub Actions CI/CD, with a live Prometheus and Grafana monitoring stack for security observability — SkyOps (skyops-api-8dn9.onrender.com). I've also built a production Python REST API with Terraform-provisioned AWS infrastructure and a 23-test automated suite — TicketDesk (ticketdesk-app.onrender.com). My full portfolio is at priyanshukainwal0.github.io.

I hold a Microsoft Azure AI Essentials certificate and a Generative AI Automation Specialization from Vanderbilt University, so my interest in AI isn't just enthusiasm — it's backed by study and practical application. I'm also Microsoft-certified in Cybersecurity Essentials, aligning with KPMG's cyber security practice areas.

I'm collaborative, coachable, and motivated by the kind of complex, meaningful client problems KPMG's teams work on every day. I'd welcome the opportunity to bring genuine technical depth and a proven delivery mindset to your graduate cohort.

Kind regards,

Priyanshu
