Dear Hiring Manager,

I'm writing to apply for the System Support Technician role at Container Deposit Systems. I want to be upfront: I don't yet have two years of paid IT customer service experience. What I can offer instead is hands-on, practical proof that I already do this kind of work well — independently, and without anyone assigning the task.

I hold a Bachelor of Information Technology and a Google IT Support Professional Certificate. As Project Manager on a university capstone, I led a 5-person team to deliver **Call-a-Technician** (callatechnician.com.au), a live booking platform now used in production by a real business — I coordinated technicians, triaged requests by priority, and was the direct point of contact for a real client throughout delivery. That experience is directly analogous to the field technician coordination and service triage this role asks for.

I've also built and now personally operate **TicketDesk** (ticketdesk-app.onrender.com), a Python-based help-desk platform covering the full incident lifecycle with accurate, structured documentation, and **SkyOps**, where I monitor a live system and respond to issues proactively before they escalate. I'm comfortable in Linux environments, can write basic Python and JavaScript, and genuinely enjoy explaining technical issues in plain language — whether to a depot operator or a non-technical stakeholder.

I stay composed under pressure, document thoroughly, and follow through reliably — qualities I've also built through two years of direct, recurring client-facing work in commercial cleaning, where I consistently scored 95% in client quality surveys. I'm a fast learner and genuinely interested in the practical, hands-on nature of this role.

Thank you for considering my application. I'd welcome the opportunity to discuss how I could contribute to your team.

Kind regards,

Priyanshu
