Dear Hiring Manager,

I'm writing to apply for the Network & Cyber Security Graduate role with 27BC. I'm currently based in Adelaide and open to relocating to Sydney for this opportunity — a structured graduate program covering networking, security, and cloud, with mentorship from experienced engineers, is exactly the foundation I want to build my career on.

My real-world experience maps closely onto what this role asks for. As Project Manager on a university capstone, I led a 5-person team to deliver **Call-a-Technician** (callatechnician.com.au), a live booking platform now used in production by a real business — I gathered requirements directly from the client, assessed their business needs, and coordinated the team through design, build, and delivery. That's the same customer delivery and coordination capability your role description calls out directly, and it's something I've already done in practice, not just studied.

On the technical side, I built and personally operate **SkyOps** (skyops-api-8dn9.onrender.com), an infrastructure platform with a live monitoring service that proactively detects issues — the same mindset cyber security operations requires for monitoring and remediating threats. I have practical, hands-on knowledge of Microsoft Azure, Microsoft 365, and networking fundamentals (TCP/IP, DNS, firewalls, VPNs) through both my Bachelor of IT and these independent projects, along with awareness of security frameworks including NIST CSF 2.0 and the ASD Essential Eight.

I have no plans for further formal study — my degree is complete, and I'm focused entirely on entering the workforce and building real, industry-grounded experience from here. I'm self-motivated, detail-focused, and genuinely excited to learn networking, security, and cloud technologies in depth under the mentorship of your experienced Network Engineers and Support teams.

Thank you for considering my application. I've included my academic transcript with my resume as requested, and I'd welcome the opportunity to discuss this role further.

Kind regards,

Priyanshu
