Dear Hiring Manager,

I'm writing to apply for the Customer Support Technician role at REDARC. I want to be upfront about two things: I don't yet have two years of paid technical support experience, and my background is in IT and software rather than electronics or automotive electrical systems specifically. I'd still ask you to consider me, because I believe the underlying skill this role is really built on — methodical troubleshooting and clear communication under pressure — is something I can already demonstrate directly.

I built and now personally operate **TicketDesk** (ticketdesk-app.onrender.com), a support case management platform covering the exact lifecycle this role works in daily — logging, prioritising, troubleshooting, resolving, and documenting cases through to closure, with a knowledge base maintained as I go rather than as an afterthought. As Project Manager on a university capstone, I led a 5-person team to deliver Call-a-Technician (callatechnician.com.au), a live platform now used in production by a real business — I was the direct point of contact resolving issues for that client, and I know what it takes to keep someone calm and informed while you work through a problem with them.

I hold a Bachelor of Information Technology and a Google IT Support Professional Certificate, and while I don't have direct automotive electrical experience, I'm a fast learner with new technical domains — every project on my resume was something I taught myself from scratch over the past year. I'm organised, detail-oriented, and genuinely enjoy the challenge of working through a complex technical problem with a customer until it's properly solved, not just closed.

I bring two years of direct, recurring client-facing experience from VIP Cleaning Services, where I consistently scored 95% in client quality surveys — proof I can build trust and deliver a genuinely good customer experience, not just technically correct answers.

Thank you for considering my application. I'd welcome the opportunity to discuss how I could grow into this role with REDARC's team.

Kind regards,

Priyanshu
