2 July 2026

Dear Hiring Manager,

I'm applying for the Deloitte Technology Graduate Program, with a preference for Software Engineering and Cloud Platforms. The way the program is framed — hands-on, problem-led, working on real systems used by real people — describes exactly how I already work, and it's the kind of environment where I know I'd grow fastest.

I'm a recent IT graduate from Federation University Australia, and over the past year I've independently designed, built, and deployed three live production systems end-to-end, without a senior engineer to hand the hard parts to. The most significant is **Call-a-Technician** (callatechnician.com.au), a full-stack booking and dispatch platform I delivered as Project Manager for a real business client — I gathered requirements directly, translated business needs into technical specifications, led a 5-person development team through Agile sprints, and saw the product through to a live launch it's still running today. That experience gave me a direct understanding of how technology decisions connect to business outcomes and service delivery, which I understand is central to how Deloitte's technology teams operate.

On the technical side, I've built a complete 6-phase DevOps pipeline with Docker, Kubernetes, Helm, GitHub Actions CI/CD, and live cloud monitoring via Prometheus and Grafana (SkyOps, skyops-api-8dn9.onrender.com), and a production Python REST API with Terraform-provisioned AWS infrastructure and a 23-test automated suite (TicketDesk, ticketdesk-app.onrender.com). My full portfolio is at priyanshukainwal0.github.io.

I also hold certifications in Microsoft Azure AI Essentials and a Generative AI Automation Specialization from Vanderbilt University — I'm genuinely curious about emerging technologies and how they translate into practical business solutions, not just theoretical interest.

I'm collaborative, curious, and driven by the satisfaction of building things that actually work in the real world. Deloitte's program is exactly the environment I want to build my career in — working alongside engineers, architects, and clients on problems that genuinely matter. I'd welcome the opportunity to discuss this further.

Kind regards,

Priyanshu
