2 July 2026

Dear Hiring Manager,

I'm applying for KPMG's 2027 Engineering Graduate Program. I'm a Software Engineering / IT graduate, and what draws me to this pathway is the description of graduates as "curious, collaborative, practical thinkers who apply their engineering mindset beyond traditional engineering roles" — that describes exactly how I work.

I bring a genuine engineering discipline to everything I build. Over the past year I independently designed, built, tested, and deployed three live production systems end-to-end, applying the same specification-driven rigour that engineering work demands: precisely defining requirements, building to those requirements, testing thoroughly, and documenting so the system can be operated, understood, and improved by someone other than me. My most significant project, **Call-a-Technician** (callatechnician.com.au), was delivered as Project Manager for a real client — I led the full project delivery lifecycle across a 5-person team, managing requirements, planning, stakeholder coordination, quality assurance, and risk throughout. The platform is still in production use by a real business today.

On the analytical and data side, I've built live performance monitoring dashboards (Prometheus and Grafana via SkyOps, skyops-api-8dn9.onrender.com), designed relational database schemas and data integration pipelines, and worked with structured datasets through SQL across multiple projects. I also have direct process improvement experience — in a previous operational role I identified and implemented a change that cut processing time by 20%, the same data-informed, practical problem-solving KPMG's engineering teams apply to infrastructure and asset management challenges.

I'm comfortable working in multidisciplinary teams, communicating across technical and non-technical audiences, and contributing to real client deliverables from day one. My full portfolio is at priyanshukainwal0.github.io. I'd welcome the opportunity to bring this engineering mindset and delivery track record to KPMG's graduate cohort.

Kind regards,

Priyanshu
