Dear Patrick,

I'm writing to apply for the Technology Design Engineer role at Emanate Technology. I'll be upfront: I'm early in my career and don't have years of experience under a "Design Engineer" title. What I can offer instead is something I think is genuinely rare at this stage — I've independently designed, built, and now operate a complete cloud-native platform covering exactly the lifecycle your role describes, end-to-end, with no senior engineer to hand the hard parts to.

That platform is **SkyOps** (skyops-api-8dn9.onrender.com), where I designed and deployed a cloud-native solution from containerisation through Kubernetes orchestration, Helm-based deployment patterns, Terraform infrastructure-as-code, and a fully automated GitHub Actions CI/CD pipeline — all built to eliminate manual delivery friction, which I understand is central to this role. I also built a proactive observability layer: a background health-check service polling system status every 60 seconds, feeding both a live dashboard and a Grafana/Prometheus stack tracking latency, error rate, and request patterns in real time, rather than waiting for a ticket to tell me something's wrong.

On a second project, TicketDesk, I provisioned AWS infrastructure with Terraform, including security group configuration and automated bootstrap scripting, and built an environment-based configuration pattern to keep test and production cleanly separated — practical experience with the security and governance thinking your role calls for.

I also bring direct stakeholder and vendor-style communication experience. As Project Manager on a university capstone, I was the primary liaison between our development team and a real external client, managing expectations and keeping documentation current throughout delivery — the same kind of clear, accountable communication needed when liaising with platform consumers and external vendors.

I recognise this role likely expects more runway than I currently have, but I'd ask you to judge me on the platform I've already built rather than the years on my resume. I'm a fast, self-directed learner — everything in SkyOps was taught to myself from scratch over the past year — and I'm confident I'd contribute real value quickly given the chance.

Thank you for considering my application. I'd welcome the opportunity to discuss this further.

Kind regards,

Priyanshu
