SUMMARY

IT professional with a Bachelor of IT from Federation University Australia, specialising in cloud-native infrastructure design, Infrastructure as Code, and observability. I independently designed, built, and now operate a complete cloud platform — SkyOps — covering the full lifecycle your role describes: containerisation, Kubernetes orchestration, Helm-based deployment patterns, Terraform IaC, CI/CD automation, and a live Prometheus/Grafana observability stack with proactive monitoring and alerting. I'm early in my career and don't yet have years of experience under a "Design Engineer" title, but I've already built and operate the same kind of scalable, reliable, cost-conscious infrastructure this role calls for — independently, end-to-end, with nobody to hand it off to. I communicate clearly with both technical and non-technical stakeholders, having led a 5-person team as Project Manager liaising directly with an external client through full project delivery.

TECHNICAL SKILLS

Cloud-Native & Infrastructure Design: Docker, Kubernetes (k3d), Helm chart authoring, HPA, Ingress, ConfigMaps, deployment pattern design

CI/CD & Automation: GitHub Actions (lint → test → build → deploy), zero-manual-step pipelines, automated Docker image builds

Cloud & Identity: AWS (EC2), Microsoft Azure / Entra ID, Microsoft 365 administration, networking fundamentals (TCP/IP, DNS, DHCP, VPN, firewalls)

Infrastructure as Code: Terraform (AWS EC2 provisioning, security groups, bootstrap scripting), render.yaml Blueprints, version-controlled, repeatable infrastructure

Observability & Monitoring: Prometheus, Grafana (auto-provisioned via ConfigMap), custom health-check services, uptime/latency dashboards, proactive alerting design

Security & Governance Awareness: NIST CSF 2.0, ASD Essential Eight, least-privilege access, RBAC, vulnerability awareness

CORE COMPETENCIES

Stakeholder & Vendor Communication

Self-Directed Learning

Continuous Improvement

Problem Solving

Documentation Discipline

Ownership & Accountability

Agile / Scrum Delivery

PROJECTS

SkyOps — Cloud-Native Infrastructure & Observability Platform

Personal Project | 2025

Live: skyops-api-8dn9.onrender.com · GitHub: github.com/Priyanshukainwal0/skyops

- Designed and deployed a complete cloud-native platform end-to-end: containerisation → Kubernetes orchestration → Helm packaging → CI/CD → observability → live production deployment — owning the full lifecycle from design through to delivery, matching exactly the scope this role describes.
- Authored a custom Helm chart and deployment pattern bundling the application with Prometheus and Grafana as sub-chart dependencies, so the entire platform — app plus observability stack — deploys with a single command, reducing delivery friction.
- Built a background health-check service polling system status every 60 seconds, feeding both a live Chart.js dashboard and a Grafana dashboard (request rate, P95 latency, error rate, HTTP status breakdown) — proactive observability and alerting design, not reactive ticket response.
- Wrote a GitHub Actions CI/CD pipeline and Terraform/render.yaml IaC enabling fully automated, repeatable deployment with zero manual steps — directly aligned with eliminating delivery friction and effort.
- Replaced SQLite with Neon PostgreSQL for persistent, restart-proof storage, optimising for reliability and cost-effectiveness on a free-tier cloud platform.

TicketDesk — Production Cloud Deployment with Security-Conscious Infrastructure

Personal Project | 2025

Live: ticketdesk-app.onrender.com · GitHub: github.com/Priyanshukainwal0/ticketdesk

- Wrote Terraform IaC to provision AWS EC2 infrastructure with a security group and automated bootstrap script — fully repeatable, version-controlled provisioning with no manual server setup.
- Designed an environment-based configuration pattern (test vs. production database) and a 23-test automated suite to validate changes before deployment, reducing risk in the delivery pipeline.

- Instrumented the platform with Prometheus and Grafana for ongoing performance and resource-utilisation visibility.

Call-a-Technician — Stakeholder Delivery & Team Leadership

University Capstone | 2024–2025

Live: callatechnician.com.au · GitHub: github.com/Priyanshukainwal0/call-a-technician

- Led a 5-person team as Project Manager, acting as the direct liaison between the development team and a real external client — the same vendor/stakeholder communication and expectation management this role requires.
- Maintained ongoing technical documentation across the project lifecycle to keep the team and client aligned on scope, decisions, and delivery status.

WORK EXPERIENCE

Warehouse Operator

Dec 2023 – Jan 2025

Electrolux Home Products · Adelaide, SA

- Identified and implemented a process redesign that cut picking time by 20% with no additional resourcing — a continuous-improvement, efficiency-driven mindset applied outside of software.

Commercial Cleaner

Aug 2023 – Present

VIP Cleaning Services · Adelaide, SA

- Consistently scored 95% in client quality surveys; introduced standardised checklists that improved site scores by 25% through proactive process design.

EDUCATION

Bachelor of Information Technology

Federation University Australia

Federation University Australia · Adelaide, SA

- Relevant units: Networking, Cybersecurity, Databases, Systems Analysis, Software Engineering, Python, Java.

CERTIFICATIONS

Microsoft Azure AI Essentials

LinkedIn Learning · Feb 2025 – May 2025

Google IT Support Professional Certificate

Coursera / Google · Nov 2025 – Jan 2026

Career Essentials in Cybersecurity

Microsoft · Mar 2025 – May 2025

Generative AI Automation Specialization

Vanderbilt University · Apr 2025 – May 2025
