SUMMARY

Software Engineer with a Bachelor of IT from Federation University Australia, specialising in Python backend development, full-stack web applications (HTML, CSS, JavaScript), and relational databases (PostgreSQL). I design, build, test, and deploy production software end-to-end — not just in a classroom. I built and shipped a production REST API in Python/FastAPI with PostgreSQL, automated testing, and Terraform-provisioned AWS infrastructure; led a 5-person team as Project Manager to deliver a live full-stack booking platform (Node.js, React, MongoDB) used by a real business; and built a complete CI/CD and cloud monitoring pipeline (Docker, Kubernetes, GitHub Actions, Prometheus, Grafana). Comfortable working independently or collaboratively in Agile teams, gathering requirements, and translating them into scalable, well-tested systems.

TECHNICAL SKILLS

Backend Development: Python (FastAPI), Node.js, Express, REST API design, JWT auth, role-based access control	Frontend Development: HTML, CSS, JavaScript, React, responsive UI design
Databases: PostgreSQL, MySQL, SQLite, MongoDB, relational schema design, query optimisation	Cloud & DevOps: AWS (EC2), Microsoft Azure (AD/Entra ID), Docker, Kubernetes, Terraform IaC, GitHub Actions CI/CD
Testing & Quality: pytest (23-test isolated-DB suite), automated CI testing, Swagger/OpenAPI documentation	Monitoring & Tooling: Prometheus, Grafana, Git, PowerShell, Bash, Agile/Scrum delivery

CORE COMPETENCIES

Analytical Problem Solving

Requirements Gathering

Agile / Scrum Delivery

Cross-Functional Collaboration

Independent & Team Work

Code Quality & Testing

Technical Communication

Project Ownership

PROJECTS

TicketDesk — Python REST API with PostgreSQL Personal Project | 2025

Live: ticketdesk-app.onrender.com · GitHub: github.com/Priyanshukainwal0/ticketdesk · Stack: Python, FastAPI, PostgreSQL, Docker, Terraform (AWS EC2), GitHub Actions, Prometheus

- Designed and built a production REST API in Python (FastAPI) covering the full CRUD lifecycle — create, update, filter by status/priority/assignee, close — with a web console and auto-generated Swagger/OpenAPI documentation.
- Designed the relational database schema and wrote a 23-test pytest suite with per-test isolated SQLite databases; the same codebase switches to PostgreSQL in production via a single environment variable (12-factor config pattern), with zero code changes.
- Wrote Terraform infrastructure-as-code to provision an AWS EC2 instance with a security group and an automated bootstrap script — fully repeatable, version-controlled cloud deployment with no manual server setup.
- Built a GitHub Actions CI pipeline that runs the full automated test suite and builds the Docker image on every push, catching regressions before they reach production.
- Instrumented the API with Prometheus metrics and a Grafana dashboard tracking request rate, P95 latency, and error rate in real time.

Call-a-Technician — Full-Stack Web Platform University Capstone | 2024–2025

Live: callatechnician.com.au · GitHub: github.com/Priyanshukainwal0/call-a-technician · Stack: Node.js, Express, MongoDB, JWT, React, HTML, CSS, JavaScript

- Led a 5-person team as Project Manager from gathering client requirements through to a live production launch — ran weekly standups, owned the sprint backlog in Agile/Scrum, and resolved technical blockers across frontend, backend, and infrastructure.
- Designed and built a Node.js/Express/MongoDB REST API with JWT authentication and role-based access control, powering an 8-stage job workflow with a full audit trail.
- Built the full frontend (React, HTML, CSS, JavaScript) for both a public-facing booking site and an internal operations dashboard — including a customer request form, automated email confirmation, and live job-status tracking for staff.

- Structured the codebase as an npm workspaces monorepo (separate marketing site, admin portal, backend API) for clean separation of concerns and independent deployability.
- Delivered a real product used by a real business client, translating stakeholder feedback into shipped features across multiple sprint cycles.

SkyOps — Cloud Deployment & DevOps Pipeline

Personal Project | 2025

Live: skyops-api-8dn9.onrender.com · GitHub: github.com/Priyanshukainwal0/skyops · Stack: Python (FastAPI), PostgreSQL, Docker, Kubernetes, GitHub Actions, Prometheus, Grafana

- Designed and shipped a complete DevOps pipeline from scratch: containerization → Kubernetes orchestration → Helm packaging → CI/CD → monitoring → live cloud deployment.
- Built a GitHub Actions CI/CD pipeline that lints, tests, builds, and pushes Docker images automatically on every commit, then deploys live with zero manual steps — true infrastructure-as-code from commit to production.
- Used PostgreSQL for persistent storage and built a background service that polls system health every 60 seconds, feeding a live monitoring dashboard and a Grafana dashboard (request rate, P95 latency, error rate) for operational visibility.

WORK EXPERIENCE

Warehouse Operator

Dec 2023 – Jan 2025

Electrolux Home Products · Adelaide, SA

- Reworked the picking sequence on my aisle — cut processing time by 20% with no additional resource, demonstrating practical process-optimisation thinking.
- Ran cycle counts and reconciliation that brought stock variances down by 30% over two quarters through analytical tracking and structured documentation.

Commercial Cleaner

Aug 2023 – Present

VIP Cleaning Services · Adelaide, SA

- Consistently scored 95% in client quality surveys; improved site scores by 25% after introducing standardised checklists — a process-improvement mindset applied outside of software.

EDUCATION

Bachelor of Information Technology

Federation University Australia

Federation University Australia · Adelaide, SA

- Relevant units: Python, Java, Databases, Software Engineering, Systems Analysis, Networking, Cybersecurity.
- Applied Agile/Scrum across all team projects; capstone delivered a live full-stack REST API and web application.

CERTIFICATIONS

Microsoft Azure AI Essentials

LinkedIn Learning · Feb 2025 – May 2025

Google IT Support Professional Certificate

Coursera / Google · Nov 2025 – Jan 2026

Generative AI Automation Specialization

Vanderbilt University · Apr 2025 – May 2025

Career Essentials in Cybersecurity

Microsoft · Mar 2025 – May 2025
